Presentation type: poster

Since release 1.0 in october 1998, the McStas neutron ray-tracing simulation package has been hosted at Risø in strong collaboration with the leading european neutron facility at ILL, Grenoble.

During its lifetime, McStas has evolved to become the world leading software in the area of neutron scattering simulations for instrument design, optimisation, virtual experiments and science.

Celebrating our 10 successful years in the neutron Monte-Carlo business, this poster draws an outline of the McStas software package and recent achievements.
